'Trees and Construction: Getting to the Root of the Problem' Seminar

Montgomery, Alabama February 4, 2010

The Alabama Cooperative Extension System has partnered with the Montgomery Chapter of the U.S. Green Building Council and will be hosting a day long workshop on "Trees and Construction; Getting to the Root of the Problem" at the Agriculture & Industries Department in Montgomery, Alabama.

This workshop was developed for professionals interested in improving their understanding of how to successfully build and work around trees in the urban landscape. Topics of interest include economic benefits of trees, tree structure and biology as it relates to safety and construction, the process of designing around trees, and successful tree preservation. This workshop will feature speakers from the Alabama Cooperative Extension System and Auburn University. Continuing educational credits are also available. For more information, contact Beau Brodbeck at brodbam@auburn.edu.
